The International Fertiliser Society's 2017 Technical Conference and AGM, at The Geological Society, London, will take place over two days (29th & 30th June). This non-residential conference is for all who are involved in the sourcing, production and handling of fertilisers, and their constituent materials. There will be a varied selection of excellent presentations, supported by full written papers. Delegates will also benefit from excellent networking opportunities and the ability to interact with the speakers.

The **Conference Dinner** will be held in the nearby Farmers Club.

Presentation topic	Presenter
New technology for producing controlled release fertilisers on demand	Taylor Pursell, New Fertiliser Technologies, USA
Sieve Tray replacement in a nitric acid absorber column	Dan Schuler, PCS Nitrogen, USA
Converting NOx to Fertiliser	Robert Richardson, Know-NOx LLC, USA
Opportunities for small scale ammonia production	Hans Vrijenhoef, Proton Ventures, Netherlands
Purpose and priorities for IFDC and the outlook for crop and human nutrition	Scott Angle, IFDC, USA
The 30th Francis New Memorial Lecture: Changes, challenges, and opportunities in fertiliser-manufacturing processes: a personal view	Hans Reuvers, Germany
Phosphogypsum stacking: new approach and case study	Vincent Dardenne, Aquale sprl, Belgium
A review of technologies to produce low-cadmium phosphate fertilisers	Prof Dr Geert-Jan Witkamp, Delft University of Technology, Netherlands
Using process simulators to train operators of fertiliser production units	Alexandre Durand, Prayon, Belgium
Long term experience in installing distributed process control technology at a major granulation plant	Tony Southerton, CF Fertilisers UK Limited, United Kingdom
Classification and Security Legislation affecting the fertiliser industry	Kish Shah, Independent consultant, United Kingdom
International harmonisation for global trade: importance and initiatives	Jan Chys, Yara S.A., Belgium

The Society's Meetings and Conferences have been running since 1947, providing a uniquely rigorous and independent insight into the technical aspects of fertiliser production.
